April 3-6, 2014

Results are based on telephone interviews conducted April 3-6, 2014 with a random sample of -1,026—adults, aged 18+, living in all 50 U.S. states and the District of Columbia. For results based on this sample of national adults, the margin of sampling error is ± 4 percentage points at the 95% confidence level.

For results based on the sample of -509— adults employed full- or part-time, the margin of sampling error is ± 5 percentage points.

For results based on the sample of -614—stock owners, the margin of sampling error is ± 5 percentage points.

For results based on the sample of -765—credit card owners, the margin of sampling error is ± 4 percentage points.

For results based on the sample of -334—retirees, the margin of sampling error is ± 7 percentage points.

For results based on the sample of -692—non-retirees, the margin of sampling error is ± 5 percentage points.

For results based on the sample of -737—homeowners, the margin of sampling error is ± 5 percentage points.

Interviews are conducted with respondents on landline telephones and cellular phones, with interviews conducted in Spanish for respondents who are primarily Spanish-speaking. Each sample of national adults includes a minimum quota of 50% cell phone respondents and 50% landline respondents, with additional minimum quotas by region. Landline and cell phone telephone numbers are selected using random digit dial methods. Landline respondents are chosen at random within each household on the basis of which member had the most recent birthday.

Samples are weighted to correct for unequal selection probability, non-response, and double coverage of landline and cell users in the two sampling frames. They are also weighted to match the national demographics of gender
